- Consistent and flexible cell culture perfusion
- See how Xcellerex™ Automated Perfusion System (APS) can make cGMP manufacturing of preclinical and clinical material more productive. APS integrates in a seamless way to Xcellerex™ XDR bioreactors and switches filters automatically . Use this versatile alternative to ATF perfusion for both process development and production.
- [Closed And Semi-Automated Processing Of CAR T Cells](#)
- This application note describes the details of a robust CAR T-cell manufacturing workflow that can be adapted for cGMP compliance in commercial production of CAR T-cells.
