

OVIVO
Value
Proposition
1161

- **PRODUCT** UPW systems
 - **INDUSTRY** Semiconductor
 - **VALUE PROPOSITION** Customized UPW solutions for chip producers
- 

UPW Systems with Benefit of SEMI Knowledge

- Ovivo provides sophisticated water treatment solutions for the manufacture of semiconductor devices from raw wafers to integrated circuits, from LCD screens to OLED displays and from Microelectromechanical systems (MEMS) to photovoltaic cells.
- Ovivo is a member of the Semiconductor Equipment and Materials International (SEMI) and International Roadmap for Devices and Systems (IRDS), Ovivo has an in-depth understanding of the electronics industry. This knowledge and experience position us as the natural partner to provide customized water treatment solutions

Customized Solutions for Chip Producers

- Starting with a thorough analysis of our clients' specific manufacturing conditions, Ovivo designs and supplies solutions that meet the exceptionally high standards of this industry.
- As an innovation-oriented company, our Switzerland-based Global Knowledge Centre is working closely with industry partners to develop new solutions from maximizing reclamation of wastewater to optimization of costs and minimize environmental impact:
- **UPW Treatment Plant:** Ovivo is working tirelessly to provide the purest water possible to meet the global semiconductor industry requirements.
- **Reuse, Reclaim and Recycle Plant:** Specially designed reclaim systems help reduce effluent waste discharge, minimise raw water needs and protect the environment.
- **Semiconductor Wastewater Treatment Plant:** To meet new manufacturing challenges, protect the environment and conserve resources, Ovivo has developed state-of-the-art processes that meet both current and future reclaim and discharge requirements.
